## How to SEARCH for the Right MS Therapy for You!

*– A quick and easy  
way to remember  
key questions to ask  
your healthcare team*

### What is SEARCH?

Many disease-modifying therapies are now approved for multiple sclerosis. Choosing a therapy or knowing if you should switch can be challenging. This requires a conversation with your healthcare team.

### How do you begin the conversation?

MSAA developed the **SEARCH** acronym to help you organize and remember important questions to discuss with your healthcare team.

## MSAA's S.E.A.R.C.H.™ stands for:

- Safety:** What are the safety profiles of these drugs?
- Effectiveness:** How effective are these treatments?
- Access:** What about insurance or assistance?
- Risks:** Are there side effects or drug interactions?
- Convenience:** How do I administer these therapies?
- Health Outcomes:** How will my health be affected?
